Art Unit: 1614

Claims 8-14 are pending in this application.

Response to Arguments

Applicant's arguments with respect to claims 8-14 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 10 recites the limitation "nonionic surfactant" in lines 3-4 of the claim.

There is insufficient antecedent basis for this limitation in the claim because claim 9, from which claim 10 depends does not recite a nonionic surfactant.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1614

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rudin et al. WO 98/18719 (AJ) in view of Burghard U.S. Patent No. 5,935,275 (AA) and Remington's Pharmaceutical Sciences (1975).

The claims are drawn to a suspension of one or more phosphate, fluoride or fluorophosphates calcium salts in a liquid medium in which the salts are less than 1g/L soluble, wherein the calcium salts comprise primary particles having diameters of from 5 to 50 nanometers (nm) and lengths of from 10 to 150 nm which have been stabilized

Art Unit: 1614

against agglomeration by a water soluble surfactant or a water soluble polymeric protective colloid adsorbed onto said particles.

Rudin et al. teach the well-known method of producing hydroxyapatite (HAP) comprising mixing a calcium salt (calcium hydroxide) with an aqueous solution of phosphoric acid and grinding the reaction product (page 1). The HAP particles are from 0.01 to 0.02 vm in width (10-20 nm) and 0.5 to 0.1 vm (500-100 nm) in length and a homogeneous concentration within the range of from 7% to 96% in the form of a suspension or a paste (page 3 paragraphs 2-5).

It does not teach the addition of a surfactant or a polymeric protective colloid to prevent agglomeration. Burgard teaches methods of stabilizing insoluble inorganic nanoparticles against agglomeration, including by precipitation in the presence of surface active compounds. Remington's Pharmaceutical Sciences provides further motivation to employ a surfactant, specifically a nonionic surfactant to prevent agglomeration of particles. Remington teaches three major uses for surfactants, wetting, solubilization and emulsifying agents (page 297, 1st paragraph). Wetting aids in the dispersion of powders to prepare pharmaceutical suspensions by breaking apart the strong bonding between granules, air between the granules and a hydrophobic surface that would prevent a solvent from penetrating and wetting (page 297).

Art Unit: 1614

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 8-14 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of copending Application No. 10/297889. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant and conflicting claims recite substantially the same subject matter, differing only in the description of the particular components claimed. For instance, conflicting claim 1 requires the particular polyelectrolyte, in combination with a calcium salt of low solubility in water such as calcium phosphate generally. None of the instant claims recites that specific combination, but instant claims 1-2 are broadly inclusive thereof since the polyelectrolyte is inclusive of polymeric protective colloids. It would have been obvious to anyone of ordinary skill in the art that the claims overlapped in scope in this manner. One skilled in the art would have been motivated to have interpreted the claims as broadly as is reasonable, and in doing so recognize that they are coextensive in scope

Art Unit: 1614

and thus the proper subject of an obviousness-type double patenting rejection as outlined by *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970). The selection of particular process of making and methods of use are coextensive in scope. It would have been obvious to smooth the surface of teeth with the composition since it is well known to remineralize teeth. By remineralizing teeth one would also be smoothing teeth.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donna Jagoe whose telephone number is (571) 272-0576. The examiner can normally be reached on Monday through Friday from 9:00 A.M. - 5:00 P.M..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marianne Seidel can be reached on (571) 272-0584. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
